PAR Electric Contractors, Inc. ([Internet Link](#)) is one of the largest and most innovative and respected electrical contracting companies in the United States.

Based in Kansas City, Missouri, PAR maintains offices in 12 states to provide nationwide services to design, construct, and maintain electrical transmission and distribution systems and substations for utility companies, municipalities, and owners of commercial and industrial projects. In addition, PAR often is called to help restore service following outages caused by severe weather and other emergencies.

PAR's highly-trained staff of professionals, using the most advanced equipment available, has the capability to manage and construct literally any electrical project. In keeping with the demands of today's marketplace, PAR Electric has capabilities and resources to complete any job, no matter how large and complex. PAR Electric also has broad experience installing telecommunications systems.

With a commitment to safety and protecting the environment, PAR has never been late completing a project and never has been involved in litigation with a project owner during nearly 50 years of service to the electrical industry--important reasons clients select PAR Electric over other companies. More information explaining the professional expertise of PAR can be found elsewhere in this assignment and on the Internet.
